

Domain retrieval exposes a hidden source of apparent fold novelty

DRR is computed on Merizo-domain Foldseek results after AF3 filtering; n labels report the AF3-passed denominator.

a AF3-passed structures split by domain retrieval

b Domains remain retrievable when full chains look novel

Domain TM ≥ 0.7 $0.5 \leq$ domain TM < 0.7 Domain TM < 0.5 AF3 failed DRR TM ≥ 0.5 DRR TM ≥ 0.7 Full-chain qTM ≥ 0.5
